NON-FARM PAYROLL

- Non-farm payrolls (NFP) are an important economic indicator related to employment in the U.S.
- Understanding this data release can help set up forex trades to take advantage of unexpected changes in employment.
- Technical analysis can be employed to the NFP report using 5- or 15-minute chart.

The release of the NFP generally occurs on the first Friday of every month at 8:30 a.m. EST. This news release creates a favorable environment for active traders because it provides a near guarantee of a tradable move following the announcement.

As with all aspects of trading. Approaching the trade from a logical standpoint, based on how the market is reacting, can provide us with more consistent results than simply anticipating the directional movement the event will cause.

Nonfarm payrolls figures is a key economic indicator for the United States economy. It represents the number of jobs opportunity within space of a month and also measure of the number of workers in the U.S. excluding farm workers and workers in a handful of other job classifications. The BLS reports the nonfarm payroll numbers to the public on a monthly basis through the closely followed “Employment Situation” report.

Arcon Investment, is a leading provider of independent investment research in more than two dozen countries across North America, Europe, Australia, and Asia. The company's products and services are geared toward individual investors, financial advisors, asset managers, retirement plan providers and sponsors, and institutional investors in the debt and private capital markets. IMPROVING THE COLLECTION PROCESS

At Arcon, billing and cash applications are managed in Oracle. However, like many companies, Arcon Investment still maintained a rather manual collections process. The team of two relied on a spreadsheet to track aging accounts, and one accounts receivable specialist spent much of their time emailing customers one by one. With a shared service center overseas, it was important to find a solution that was easy to implement and easy to integrate with Oracle.

Receivables Intelligence has helped streamline the company's collections process, and the automated reminder emails have been particularly helpful to standardize the process globally. During implementation, the Dun & Bradstreet team worked with Arcon to create tailored workflows that made the most sense for each business unit and subsidiary in each country and each customer.

For example, in one country a reminder email is sent five days after the payment due date is missed; in another country, the reminder email is sent sooner. Certain key clients that require a more personal touch do not receive an automated reminder email at the beginning of collections process.

I have become increasingly wary about investing in cryptocurrency since it can be extremely risky. I found Arcon at a conference I was in Houston Texas and decided to listen to what they had to say... I am incredibly happy I did because they really took the time to explain how the industry works and what makes them different I decided to invest in NFP which was the current project they were working on and I am already seeing a decent return With more well scheduled to come online I expected from the platform
